

My Gateway™ - OEM Payment Platform

My Gateway provides a Payment Gateway facility to enable merchants, payment processors and service providers to accept common payment cards for Electronic Commerce. My Gateway provides front-end payment and account management functions coupled with an on-line administrative platform, allowing acquirers, payment processors and merchants to accept UnionPay and WeChat Pay payments with minimal implementation effort.

My Gateway is a high value-add service which simplifies the payment acceptance process for on-line merchants and processors.

My Gateway provides an attractive outsourced solution with secure payment processing services for major payment card brands across multiple channels, including call centres, IVR, e-commerce and m-commerce. My Gateway also provides merchants and processors with administrative tools to improve payments management and reduce their need for bank support. A turnkey payment gateway, My Gateway is a cost effective, high function payment service that significantly reduces the complexity and costs of acquiring, enabling, supporting, and processing electronic payment transactions.

Features

- Simplifies merchant enablement
- Multi-currency processing
- Real-time online transaction processing
- Real-time transaction management
- Online management portal access
- Supports UnionPay and WeChat

Benefits

- Lower cost than in-house solution
- Removes operational overheads
- Your branded payments solution
- Faster time to market
- Minimal development effort required
- Significantly reduces merchant's investment risk
- Provides 'Future Proofing', where My Gateway takes care of ongoing compliance issues, and ensuring the gateway provides leading edge functionality

Proven and Reliable

- Used by merchants in multiple countries and industries
- Cloud based infrastructure with high transaction throughput
- Shared infrastructure to spread costs
- Leverages multiple existing payments links for improved reliability
- PCI Compliant
- High quality, multi-location support

Secure and Easy Implementation

My Gateway provides a secure Web-Services style connection mechanism which supports all major integration environments, such as Microsoft .COM and .NET, JSP and PHP. This easily and quickly integrates with all merchants' business applications.

Full detailed documentation and fully working sample code in your preferred scripting language is provided to ensure minimal work is required at the merchant site. My Gateway also supports international merchant requirements – including multi-country operations with multiple settlement options.

Merchant Administration

My Gateway includes an interactive Internet Portal for processors and merchants to complete administration and transaction search functions. The merchant administration facility provides secure browser access to the central transaction database, enabling the completion of required non-payment functions.

In addition to processing payments, Merchants are also able to perform other payment functions, such as processing voids and refunds, checking transaction details and totals, creating reports, and managing reconciliation.

Features

- Manual transaction entry capability
- Interactive searches of transaction logs, with void and full or partial refund operations for any transaction
- Full audit history for each shopping transaction
- Support for recurring authorizations, and reversals
- Standard periodic reports
- Detailed report download functions
- Secure access using SSL and PCI compliant login credentials
- Operator privileges based on responsibility levels

Customer Management

My Gateway provides an optional, full-service customer account management system designed for merchants who need to manage an on-going relationship with their customers. While merchants may provide an account/customer management system hosted on their own servers; My Gateway provides this service, freeing you from the need to manage sensitive customer data. Every merchant is provided with a database hosted on the My Gateway platform. Customer information is stored on the database and accessed via Interface Calls from the merchant website or via the interactive Merchant Administration portal.
